PROFILE SUMMARY

Java Developer skilled in Core Java, Spring Boot, Hibernate, JPA, JDBC, SQL, and REST APIs. Developed backend projects including a Fitness Tracker and UPI Payment System, applying OOP principles and database integration. Seeking an entry-level Java Backend Developer opportunity to build scalable applications.

EDUCATION

Bachelor of Science – Information Technology 2023 – 2025

Siddharth College of Arts, Science and Commerce | CGPA: 7.3

Higher Secondary Certificate (Class XII) 2020 – 2022

New English Junior College | Class XII: 61%, Class X: 65%

EXPERIENCE

Java Developer Intern Jan 2026 – Jun 2026

BLOBCITY iSolutions Private Ltd

- Assisted in developing and maintaining REST APIs using Java and Spring Boot for internal data-processing tools
- Collaborated with the engineering team on debugging, unit testing, and code reviews to improve backend service reliability
- Gained hands-on exposure to SQL query optimization and Git-based version control workflows
- Developed an automated order-verification pipeline integrating Shopify and the WhatsApp Business API, processing ~1,000 orders/day
- Built a React-based customer portal allowing real-time confirmation/correction of delivery addresses, with live sync back to Shopify
- Eliminated manual address-verification effort by automating the entire confirmation workflow, reducing delivery errors and support overhead

TECHNICAL SKILLS

Languages: Java 17, JavaScript, SQL

Frameworks & Technologies: Spring Boot 3, Spring MVC, Spring Data JPA, Hibernate, JPA, JDBC, Servlets, JSP, REST APIs

Databases: MySQL, PostgreSQL

Tools & Version Control: Git, GitHub, Maven, Postman, Docker, VS Code, Eclipse IDE, IntelliJ IDEA

Core Concepts: OOP, Collections Framework, Multithreading & Concurrency, Exception Handling, System Design Basics

PROJECTS

Fitness Tracker Microservices | Java, Spring Boot, Spring Cloud, Kafka, Docker, Keycloak April 2026

GitHub: github.com/Venu-15/fitness-tracker-microservices

- Architected a 6-service Spring Boot/Spring Cloud backend with Eureka service discovery, a centralized Config Server, and an API Gateway, for tracking fitness activities and AI-generated workout recommendations
- Secured the gateway with Keycloak OAuth2/PKCE, validating JWTs on every request and auto-provisioning user profiles in PostgreSQL on first login
- Built an event-driven pipeline with Apache Kafka linking a MongoDB-backed Activity Service to an AI Service generating recommendations via the Gemini API
- Containerized the full stack with Docker Compose for one-command local deployment

UPI Offline Mesh Payments Java, Spring Boot, REST API, AES-256-GCM, RSA-OAEP January 2026

GitHub: github.com/Venu-15/upi-offline-mesh-payments

- Architected a Spring Boot backend simulating offline UPI-style payments propagated through a Bluetooth-style mesh network without internet connectivity
- Implemented hybrid encryption (RSA-2048/OAEP, AES-256-GCM) ensuring end-to-end confidentiality and tamper-evidence across untrusted devices
- Designed an idempotent settlement layer using SHA-256 hashing and atomic operations to prevent double-settlement under concurrent load
- Built REST API endpoints with replay-attack protection via timestamp validation and per-transaction UUID nonces

CERTIFICATION

Full Stack Java Development — Qspider 2026

Completed an intensive full stack development program covering Core Java, OOP fundamentals, Spring Boot, REST API design, JDBC/Hibernate, and MySQL database integration, with hands-on practice building and deploying end-to-end web applications through real-world capstone projects.
