

VENUGOPAL LODDA

Full Stack Java Developer

Thane, Maharashtra, India | +91-9347702932 | loddavenugopal@gmail.com
[linkedin.com/in/venugopal-lodda](https://www.linkedin.com/in/venugopal-lodda) | github.com/Venu-15 | venugopal-dev.vercel.app

PROFESSIONAL SUMMARY

Full Stack Java Developer with hands-on experience building end-to-end web applications and microservices using Spring Boot, Spring Cloud, Hibernate/JPA, JDBC, and MySQL. Comfortable across the full stack: schema design, event-driven backend services with Kafka, REST API security with OAuth2/JWT, and responsive UI. Strong grounding in OOP, MVC, and system design fundamentals, with an active focus on writing clean, maintainable code. Seeking an entry-level Java / Backend Developer role.

TECHNICAL SKILLS

Languages: Java, JavaScript, SQL

Backend & Frameworks: Spring Boot 3, Spring MVC, Spring Cloud, Hibernate, JPA, JDBC, Servlets, JSP, REST API, RESTful Web Services

Microservices & Messaging: Microservices Architecture, Apache Kafka, Eureka Service Discovery, API Gateway, Spring Cloud Config

Frontend: HTML5, CSS3, JavaScript, DOM Manipulation

Databases: MySQL, PostgreSQL, MongoDB, SQL

Tools & Platforms: Git, GitHub, Maven, Postman, Docker, Docker Compose, VS Code, Eclipse IDE, IntelliJ IDEA

Core Concepts: OOP, Collections Framework, Exception Handling, CRUD Operations, Database Schema Design, MVC Architecture, System Design Basics

PROJECTS

Fitness Tracker Microservices | Java, Spring Boot, Spring Cloud, Kafka, Docker, Keycloak

2026

GitHub: github.com/Venu-15/fitness-tracker-microservices

- Architected a 6-service Spring Boot/Spring Cloud backend with Eureka service discovery, a centralized Config Server, and an API Gateway, for tracking fitness activities and AI-generated workout recommendations.
- Secured the gateway with Keycloak OAuth2/PKCE, validating JWTs on every request and auto-provisioning user profiles in PostgreSQL on first login.
- Built an event-driven pipeline with Apache Kafka linking a MongoDB-backed Activity Service to an AI Service generating recommendations via the Gemini API.
- Containerized the full stack with Docker Compose for one-command local deployment.

UPI Offline Mesh Payments | Java, Spring Boot, REST API, AES-256-GCM, RSA-OAEP

2026

GitHub: github.com/Venu-15/upi-offline-mesh-payments

- Architected a Spring Boot backend simulating offline UPI-style payments propagated through a Bluetooth-style mesh network without internet connectivity.
- Implemented hybrid encryption (RSA-2048/OAEP, AES-256-GCM) ensuring end-to-end confidentiality and tamper-evidence across untrusted devices.
- Designed an idempotent settlement layer using SHA-256 hashing and atomic operations to prevent double-settlement under concurrent load.
- Built REST API endpoints with replay-attack protection via timestamp validation and per-transaction UUID nonces.

EDUCATION

Bachelor of Science in Information Technology

2023 - 2025

Siddharth College of Arts, Science and Commerce, Mumbai | CGPA: 7.3 / 10.0

Higher Secondary Certificate (Class XII)

2020 - 2022

New English Junior College | Class XII: 61% | Class X: 65%

CERTIFICATIONS

- Essential SQL Skills for Data Beginners — Analytics Vidhya (2025)
Covered relational query writing, multi-table joins, aggregation, and filtering for data analysis on structured datasets.
- JavaScript Bootcamp — LetsUpgrade (2026)
Practiced core JavaScript, ES6+ syntax, and DOM manipulation through hands-on exercises and mini-projects.
- ChatGPT as Your Assistant — Analytics Vidhya (2026)
Learned to apply AI tools effectively for code assistance, documentation, debugging, and day-to-day developer productivity.
